Subject: Limited Soil Investigation

123-145 West Pomona Avenue and
1528-1532 South Primrose Avenue
Monrovia, California 91016
AEI Project No. 392121

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Limited Soil Investigation (the "Investigation") performed at the above referenced subject property, herein referred to as the "Site" (Figures 1 and 2). This Investigation was completed in general accordance with the scope of services outlined in our authorized proposal number 60235.

1.0 SITE DESCRIPTION

The Site is bordered by West Evergreen Avenue to the north, South Primrose Avenue to the west, and West Pomona Avenue to the south in a combined commercial and industrial area of Monrovia, California (Figure 2). The Site is approximately 1.82-acres in size and consists of two single-story combined warehouse and office buildings. There are three concrete and asphalt parking areas on the Site separated by the two Site buildings. The eastern most parking area is located along the eastern portion of the Site. A second parking area is centrally-located between the two Site buildings. The westernmost parking area is located along South Primrose Avenue. The Site is also improved with concrete walkways and minor associated landscaping.

The Site is relatively flat and sits at an elevation of approximately 453 feet above mean sea level. The regional topographic gradient direction slopes toward the south-southwest and, therefore, the direction of groundwater flow beneath the Site is inferred to be to the south-southwest.

Groundwater monitoring data was obtained from California's State Water Resources Control Board Geotracker website for Pacific Atlas Oil (former Arco Station) located at 1601 South Myrtle Avenue, across West Pomona Avenue, approximately 0.06-mile east-southeast of the Site. As of December 2011, the depth to groundwater ranged between 212.75 feet and 222.82 feet below ground surface (bgs) and the average depth to groundwater was approximately 218.42 feet bgs.

According to the Mount Wilson and Azusa Map, published by the Dibblee Geologic Foundation, the Site is underlain by Holocene-aged unconsolidated and eroded alluvial deposits consisting of gravel, sand, and silt of the valley areas.

2.0 BACKGROUND

A Phase I Environmental Site Assessment (ESA) was performed by AEI and documented in a report dated August 13, 2018 (AEI Project Number 392121). As detailed in the Phase I ESA, the Site was utilized for agricultural purposes between approximately 1928 and 1949. Between 1952 and 1964, the Site was used as a lumber storage yard with no associated buildings on-Site. By 1966, a warehouse building had been constructed at 123 West Pomona Avenue. Between 1966 and 1995, the Site was occupied by a hardware and lumber store (under multiple names, including Myrtle Avenue Lumber, Bill Ding Lumber, and True Value) utilizing the remainder of the Site as a lumber yard. Since the closing of the hardware and lumber store, the 123 West Pomona Avenue portion of the Site has been occupied by a fitness center, a church, and currently by a wine club distributor. The multi-tenant light warehouse/office building that is presently located at 137 West Pomona Avenue was constructed in 1997, and has since, been occupied by several various small businesses (none of which have any environmental significance). Currently, the 5-unit building is occupied by a vape cigarette distributor, a trade show stage storage company, a Chinese furniture importer, and two furniture and household storage companies. Additionally, the westernmost parking lot is currently leased by the City of Monrovia.

During the time that the Site was used as a lumber yard, other than the hardware store building (123 West Pomona Avenue) the majority of the Site appeared to be unpaved dirt lots. Historically, the wood stored at lumber yards would include chemically treated lumber, typically spray applied. The most common types of chemicals were semi-volatile organic compounds (SVOCs), including creosote. As such, the former use of the Site as a lumber yard was identified as a recognized environmental condition (REC) by AEI. Currently, the entirety of the Site is either paved or covered by structures; however, AEI understands that the Site is currently planned for redevelopment as a mixed residential and commercial use property. Consequently, AEI recommended that soil sampling be conducted at the Site to assess whether the historical lumber yard operations have adversely impacted the Site subsurface.

3.0 INVESTIGATION EFFORTS

AEI was requested to perform a Limited Soil Investigation including the collection of soil samples, to determine whether the historical lumber yard operations have adversely impacted the Site.

This work was performed under the oversight of a California licensed Professional Geologist.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits were not required for this investigation. The public underground utility locating service DigAlert was notified to identify public utilities in the work area. On November 16, 2018, private utility locating was conducted by Pacific Coast Locators (PCL) of La Crescentia, California to identify underground utilities on the Site. The geophysical survey was conducted using a magnetometer, ground penetrating radar and digital locator. Where potential subsurface utilities or potential obstructions were identified, the boring locations were adjusted accordingly.

During the utility location a previously unknown anomaly was identified in the northwest portion of the Site in the area of the proposed boring B-9. Approximate dimensions of this feature were not provided to AEI. While the anomaly could not be definitively identified, the anomaly profile is consistent with that of a small underground storage tank (UST) or small clarifier. Boring B-9 was slightly relocated from its original location to adjacent to this feature.

3.3 Drilling and Soil Sample Collection

On November 19, 2018, nine soil borings (B-1 through B-9) were advanced throughout three the parking areas at the Site (Figure 2). Borings B-1 through B-3 were located in the easternmost parking area. Borings B-4 through B-6 were located in the center parking area. Borings B-7 through B-9 were located in the westernmost parking area. The borings were advanced by J&H Drilling of Buena Park, California using Geoprobe model 5400 limited access direct-push drilling rig. The borings were advanced to a depth of approximately 10 feet bgs. The locations of each boring are listed below:

- Boring B-1 was advanced in the southeastern portion of the Site.
- Boring B-2 was advanced in the eastern portion of the Site.
- Boring B-3 was advanced in the northeastern portion of the Site.
- Boring B-4 was advanced in the northern portion of the Site.
- Boring B-5 was advanced in the center portion of the Site.
- Boring B-6 was advanced in the southern portion of the Site.
- Boring B-7 was advanced in the southwestern portion of the Site.
- Boring B-8 was advanced in the western portion of the Site.
- Boring B-9 was advanced in the northwestern portion of the Site.

The borings were advanced using 2.25-inch outer diameter rods and samples were collected by advancing the rods with acetate sample liners in approximately 5-foot intervals. After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to the onsite geologist.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs (Appendix A). One soil sample from each boring, with the highest PID reading, was selected for laboratory analysis. Selected soil samples were sealed with Teflon tape and plastic end caps.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

3.4 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with hydrated bentonite chips and completed at the surface with black-dyed concrete to match the surrounding conditions.

3.5 Laboratory Analyses

The soil samples were labeled and placed into a cooler with ice following sampling. The samples were transferred under appropriate chain-of-custody documentation to Asset Laboratories of Cerritos, California. Laboratory analytical documentation is provided in Appendix B.

Laboratory analysis of nine (9) soil samples consisted of the following:

- Semi-Volatile Organic Compounds (SVOCs) by U.S. Environmental Protection Agency (EPA) Test Method 8270C
- Title 22 metals by U.S. EPA Test Method 6010B/7471A

Laboratory analysis of one (1) soil sample consisted of the following:

- Total Petroleum Hydrocarbons (TPH as gasoline, diesel, and oil) using US Environmental Protection Agency (EPA) Test Method 8015M

3.6 Investigation Derived Wastes

No investigation derived waste was created during this investigation.

4.0 FINDINGS

The soil results were analyzed as part of this investigation were reviewed and compared to the May 2018 U.S. EPA Industrial and Residential Regional Screening Levels (RSLs), Region 9. The RSLs are risk-based concentrations derived from standardized equations combining exposure information assumptions with U.S. EPA toxicity data. The RSLs are used for site screening and as initial cleanup goals, if applicable. The RSLs are considered by the U.S. EPA to be protective for humans (including sensitive groups) over a lifetime; however, they are not always applicable to a particular site and do not address non-human health endpoints, such as ecological impacts.

The soil results for metals were further compared to the background concentrations of metals that naturally exists in Southern California soils. A study titled *Background Concentrations of Trace and Major Elements in California Soils*, dated March 1996, by the Kearney Foundation of Soil Science was also reviewed for information on the concentrations of background metals in California soils. The Kearney report is a relevant source used by public policy makers and those in the private sector concerned with environmental remediation and land use planning.

4.1 Geology and Hydrogeology

Sediments encountered in each of the borings generally consisted of a yellowish brown, well graded, fine to coarse-grained, dry, moderately dense sand with little silt between 0.4- and approximately 7-feet bgs. This sand was overlain by asphalt and underlain by a silty sand to the terminal depth of 10-feet bgs in each of the nine borings (Appendix A).

Groundwater was not encountered in borings B-1 through B-9 and was not part of this investigation.

4.2 Soil Sample Analytical Results: TPH, SVOCs

The following information is a summary of the soil sample analytical test results. This information has also been included in Table 1. The laboratory reports have been included as Appendix B of this Report.

- Total Petroleum Hydrocarbons as gas (TPH-g), diesel (TPH-d), and oil (TPH-o) were not detected above laboratory reporting limits in the soil sample analyzed
- Phenol was detected in the sample analyzed from boring B-6 at a concentration of 0.36 milligrams per kilogram (mg/kg). The detected concentration is below both its residential and industrial RSL.
- No other SVOCs were detected in samples from any of the borings above the laboratory reporting limits.

4.3 Soil Sample Analytical Results: Metals

The following information is a summary of the soil sample analytical test results. This information has also been included in Table 2. The laboratory reports have been included as Appendix B of this Report.

- Metals (arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, zinc) were detected in the samples analyzed at concentrations exceeding their respective reporting limits. The detected concentrations were below their respective regulatory screening levels and/or were within established background concentrations.

5.0 SUMMARY AND CONCLUSIONS

AEI has completed a Limited Soil Investigation at the Site to evaluate current conditions related to the former lumberyard activities which took place on the Site from 1966 through 1995 as described in the Phase I ESA by AEI dated August 13, 2018. A total of nine borings (B-1 through B-9) were advanced at the Site for the collection of soil samples. One soil sample from each boring (with the highest PID reading) was selected for laboratory analysis. A subsurface anomaly consistent with the signature of a small UST or clarifier was identified in the area of boring B-9. AEI submitted the soil sample from the anticipated depth from below this feature for the additional analysis of TPH.

The soil samples submitted to the laboratory for analysis as part of this investigation were analyzed for semi-volatile organic compounds (SVOCs), metals, and TPH. Phenol was detected in one soil sample (B-6-10') above the laboratory reporting limit. The detected concentration of phenol is below both its residential and industrial RSLs. No other SVOCs were detected at concentrations at or above their respective practical quantitation limits (PQLs) in the soil samples submitted for analysis. Metals were detected in the soil samples; however, the detected concentrations were below their respective regulatory screening levels and/or were within established background levels. TPH was not detected at or above the PQL in the single soil sample analyzed. Based on these results, it is AEI's opinion that no further action is warranted.

Limited Soil Investigation

123-145 West Pomona Avenue and 1528-1532 South Primrose Avenue, Monrovia, California 92016

The client should be aware of the subsurface anomaly in the area of boring B-9 and that further evaluation may be needed to positively identify this feature.

6.0 REPORT LIMITATIONS AND RELIANCE

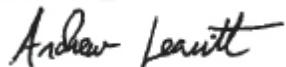

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the Site. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Mr. Kevin Farrell/FRC Realty, Inc. All reports, both verbal and written, whether in draft or final, are for the benefit of Mr. Kevin Farrell/FRC Realty, Inc. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Mr. Kevin Farrell. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at 310-798-4255.

Sincerely,
AEI Consultants

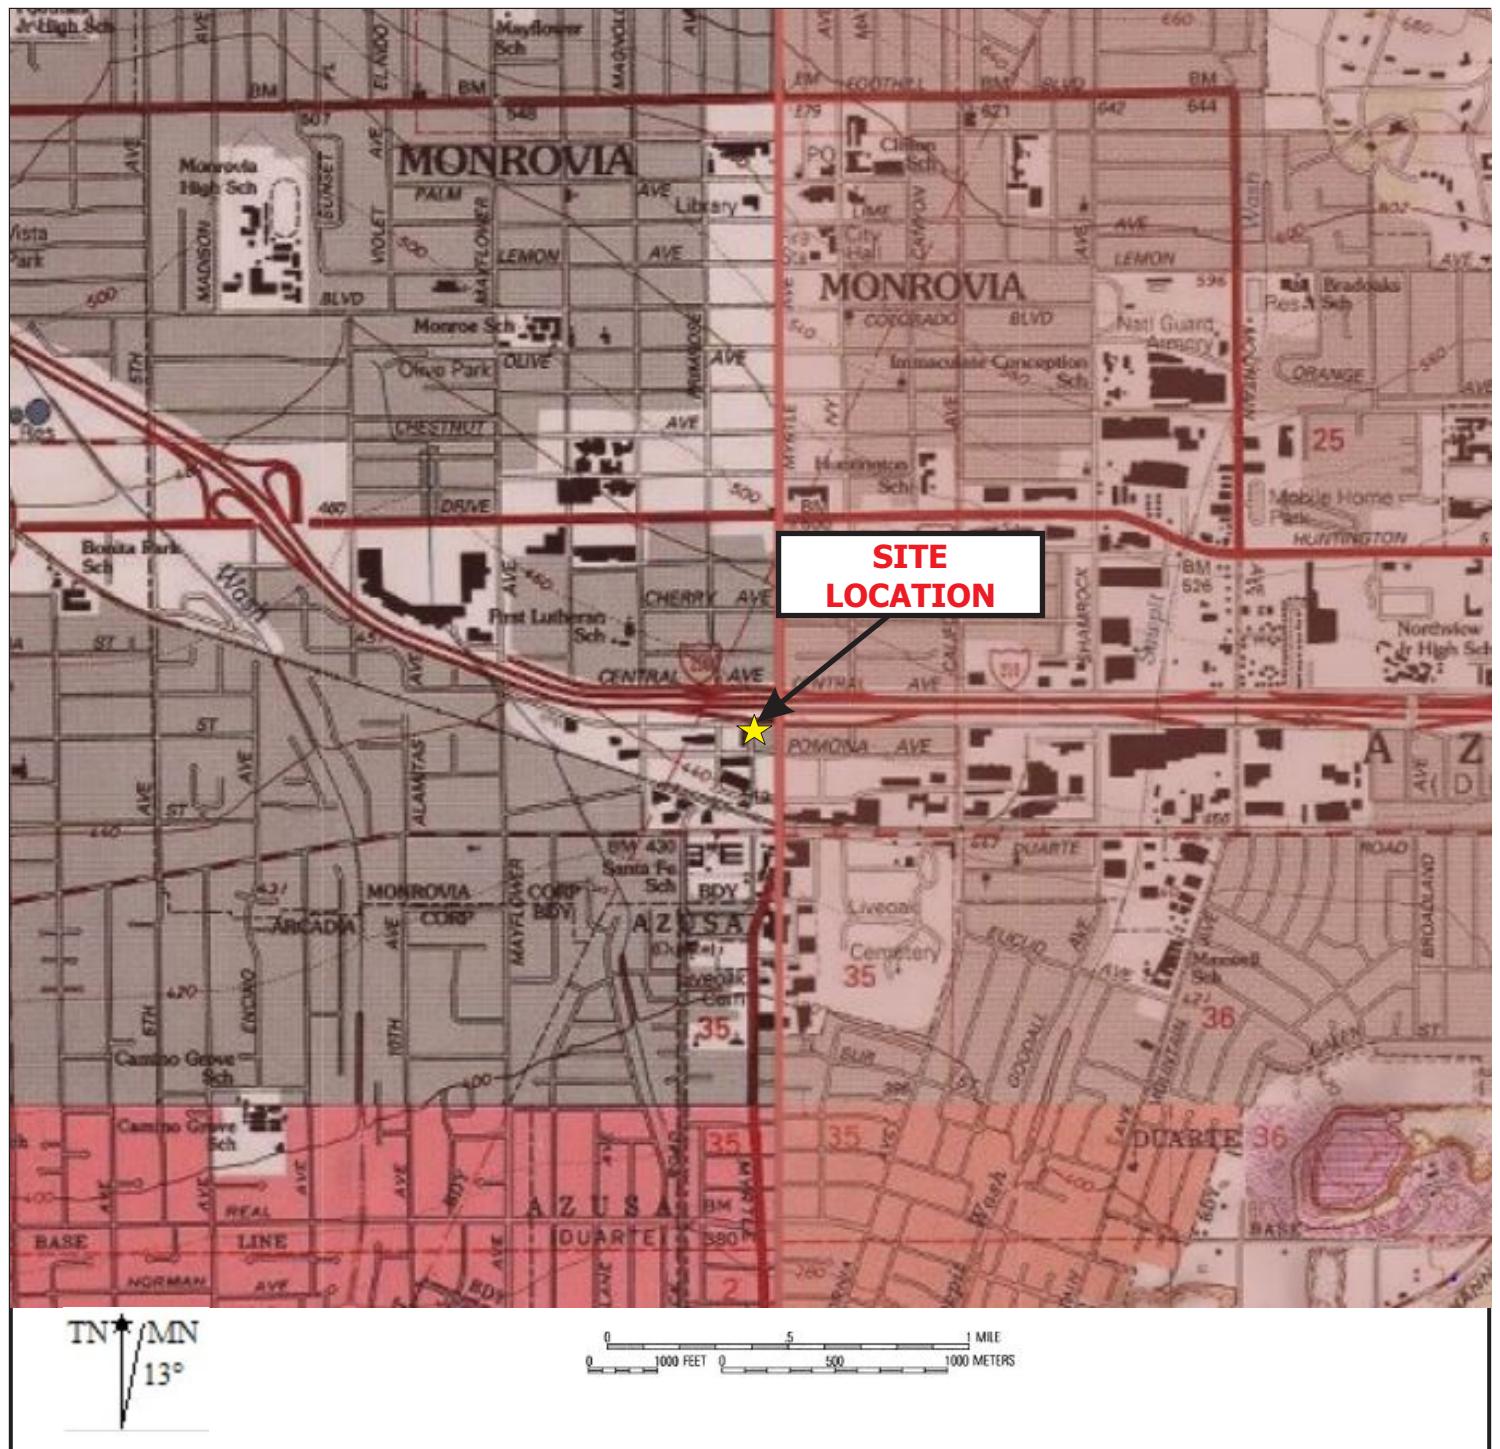

Andrew Leavitt, P.G.
Project Manager

Kent Vollmer, P.G., C.E.G
Department Manager

Workorder No.: N033048

RE: PhII, 392121

Attention: Andrew Leavitt/Kent Vollmer

Enclosed are the results for sample(s) received on November 20, 2018 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

 for

Molky Brar
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

Lab Order: N033048

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comment For EPA 6010B:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for several analytes possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments For EPA 8270C:

Matrix Spike (MS) is outside recovery criteria for several analytes on QC batch 71522 possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

RPD for Matrix Spike (MS)/Matrix Spike Duplicate (MSD) is outside criteria for several analytes on QC batch 71522 possibly due to non-homogeneity of sample; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On: 11/20/2018 Workorder: N033048
Rep sample Temp (Deg C): 2.4 IR Gun ID: 1
Temp Blank: Yes No
Carrier name: Golden State Overnight
Last 4 digits of Tracking No.: 7083 Packing Material Used: Bubble Wrap
Cooling process: Ice Ice Pack Dry Ice Other None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Present <input type="checkbox"/>
2. Custody seals intact, signed, dated on shipping container/cooler?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Present <input checked="" type="checkbox"/>
3. Custody seals intact on sample bottles?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Present <input checked="" type="checkbox"/>
4. Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
5. Sampler's name present in COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
6. Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
7. Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
8. Samples in proper container/bottle?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
9. Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
10. Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
11. All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
13. Water - VOA vials have zero headspace?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
15. Did the bottle labels indicate correct preservatives used?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
16. Were there Non-Conformance issues at login? Was Client notified?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
