22093	10/5/2022 17:57		This is only a test.			
22095	10/5/2022 18:37	Betsy Woodford	I'm just very wary of all these solar power companies. I'm not sure that they are regulated and supervised. I know that SCE is. I wouldn't like my bill to increase, even by a little amount as we face a recession. Are there hidden fees in this type of arrangement? It all goes through your SCE bill, it would be easy for an outside company to charge more. Who could question that ? SCE wouldn't. I'd rather stay with SCE until the system becomes clearly and more regulated.			X
22097	10/5/2022 20:34	Waltraut Bublitz	Yes, I think the City should move forward with bringing the ordinance for discussion and joining the CPA as soon as feasible. We all need to do our part in reducing greenhouse gases and trying to save the environment and our planet. Based on the provided documentation, there don't seem to be any potential negative impacts from joining the JPA, and we consumers as well as the environment would tremendously benefit from it.	X		
22100	10/5/2022 22:45	Brenda Trainor	I strongly encourage the City to participate in the CPA. The City must do as much as it can to encourage the use of clean energy, and I believe that with greater participation by municipalities, the market will eventually provide more and cheaper kinds of solar energy. We must put forth our values to protect the environment and our future by encouraging the use of clean energy. I want the choice and I need my City to give me the option to do more for the environment and to collaborate with other cities fir greater local control.	X		
22101	10/6/2022 8:15	Carl Pregozen	I am in favor of Monrovia joining CPA and selecting the 100% Green power option (even if it costs a little more than other options). We must invest in reducing our environmental impact.	X		
22102	10/6/2022 8:38	Colleen Tuite	I would strongly support the city partnering with CPA	X		
22103	10/6/2022 8:53	Mary Stohlma	1. How many and what other cities are interested or planning to becoming members of this group? 2. What is the reliability of the transmission? 3. If Edison is down, is this group down because they rely on Edison transmission lines? I am very interested and encouraged that there maybe an alternative to SCE! I have lived in Monrovia for 45 years and my September bill was over 300% higher than ever! And SCE said the September bill MAYBE 30% more, what a propaganda spin!! And the CEO of SCE makes some 11million dollars a year! That is totally unreasonable, when seniors are just trying to get survive.	X		
22104	10/6/2022 9:06	Daniel Hagerty	I am fully supportive of the city of Monrovia becoming a member of the CPA. The cost associated with this transition is reasonable and we would be joining other cities at the forefront of combating climate change. Climate change does not respect borders - of our city, our state, or even the nation. It is a worldwide phenomenon that must be dealt with collectively, and if Monrovia can help address this phenomenon in its own small way, we should seize the opportunity. By joining the CPA, we will be increasing the demand for clean energy, which will in turn increase the incentive for SCE and others to supply clean energy, which will, over the long term, bring the price down.	X		
22105	10/6/2022 9:50	Randa Wahbe	Joining the JPA seems to have merit; however, I have several questions: 1) If the City were to remove itself from the JPA, what would be the monetary obligation to compensate the JPA for energy supplies reserved for Monrovia customers? 2) Does joining the JPA guarantee uninterrupted electric service? Currently, we experience numerous power outages due to SCE servicing the lines or issuing brown outs due to storm activity. 3) What is the increased cost associated with the Clean and Lean options? Thank you.	X		

22106	10/6/2022 10:50	Robert Helbing	<p>I strongly recommend against joining the Clean Power Alliance. This installs no new renewable generating capability in our state. It invests nothing in grid or distribution improvements. It merely adds a new layer of administration and a new layer of separation between users of electricity and those who provide it.</p> <p>The CPA claims it will focus more effort within the state to switch electricity generation to renewable sources. But Sacramento has already enacted the strictest mandates in the world with regard to using renewables. Edison and other utilities are already putting massive investments into wind, solar, batteries and so on. To little effect, as it happens; natural gas is becoming a greater and greater share of generation, passing 50% just last year (hitting 50.2%). With the drought slashing hydro power, the 2022 total from natural gas will almost certainly be higher.</p> <p>https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2021-total-system-electric-generation</p> <p>We don't need to add more administrative staff or layers of bureaucracy to our power systems. We need to focus investment on physical infrastructure. The CPA is a distraction, an unnecessary expense and a layer of more unaccountable bureaucrats who love process but know nothing about powering our homes and businesses.</p>				X
22107	10/6/2022 11:01	Roberta Schaeffer	<p>Yes, I am interested. It is probably a good idea.</p> <p>However, there are many generalities in this presentation, so I would rely on the City Council doing a ton of due diligence. There are certainly some terms I do not fully understand. And, other than cities who have not qualified (why?) to join, why have other cities declined to join? Are there even geothermal (what is that) options in this two county area?</p> <p>"We" are really fixated on heat and "global warming" at this time but when mother Nature changes her mind and we have far more cloudy, overcast, foggy, whatever days, what is the fallback?</p> <p>The nature of Nature is change. Is there climate change? Of course. Is it the fault of humans? Perhaps some. Are we just being goody two shoes? Have the "shriekers" gotten to us?</p> <p>Everything we do has some impact on our world. We produce the cleanest energy of virtually anywhere in the world. So when we push something like oil production off to other nations, we may feel superior but we are just moving the problems elsewhere, which comes back to us anyway. Windmills have been made safer for birds. What about solar?</p>				X
22113	10/6/2022 13:01	Chris Iacobucci	#This seems like a good idea. I hope that it would lead to an increase in incentives for our residents to add solar and battery storage. I would love to see our city go 100% renewable energy, mostly by adding solar to our own rooftops and vastly increasing battery storage.				X
22114	10/6/2022 13:40	Melissa Taylor	I think this is great opportunity! I love seeing Monrovia head in the right direction.				X
22115	10/6/2022 14:01	Darin Douma	I'd very much be interested in having Monrovia join this program and provide me with an option to select 100% green energy for my home.				X
22116	10/6/2022 14:42	Gabrielle Klein-Meji	Absolutely, I'm interested! I'm thrilled to be able to get more of my electricity from renewable resources, especially since as a renter, I'm limited in what I can do (like solar panels, for example). I hope that the city will choose the highest level of renewable sources for all city electricity use, and will encourage businesses and residents to do the same.				X

22117	10/6/2022 14:46	Scott Austin	I am interested in the City moving forward in joining the CPA JPA,. I think we should take action as soon as possible to move all of Monrovia into "Clean Power" category. Then within two years transition to "100% clean power" category. Delaying or not taking any action from the policy makers. Is a complete failure of the elected officials to address climate change..	X		
22121	10/6/2022 16:04	Gary	The city's main concern should be cost and reliability. The presentation indicates the cost will definitely rise depending on the type of power source chosen. It does not address system reliability. Do we experience an abundance or an increase of power interruptions when the wind turbines or solar panels fail or undergo extended maintenance shutdowns? What happens when the demand exceeds the supply? How does this impact the cost to the consumer?			X
22123	10/6/2022 17:28	laura sarff	Interested as long as rates don't change. Not interested in anything that will increase electricity rates. Additionally, power seems to go out more here than in any other place I've lived (here for past 2 years). I'm concerned about reliability of electricity services. If using alliance and committing to "renewable" resources, will the power here be even less reliable? that is a big concern,	X		
22124	10/6/2022 19:06	David Stucker	I will opt out. The report talks about green power being generated the transmitted. They don't mention how they keep the non green power out. Like a lake that fills with water from all the rivers and streams and all of the cities around the lake pump it out, you just get a mix of what ever gets put in. When I opt out and my neighbor opts in, what is the difference? We get the exact same mix of green and non green power. They just pay more to feel better about the environment, but essentially have done nothing for the environment. The city should be green they need to push the state and federal governments to get a grid that is supplied with green generation, not sign up their citizens to get the same generation at a higher price..			X
22127	10/7/2022 6:27	Michael Selevitch				
22133	10/7/2022 10:35	Donna Baker	This is a fantastic option for Monrovians. We need to do our part to help fighting climate change and this is the perfect opportunity. Clear air and renewable resources are cutting edge! Please consider joining the JPA!	X		

			<p>I am strongly in favor of Monrovia joining at the 100% Green level.</p> <p>This program lets customers make the choice so if there were people not in favor they have the option to opt out. It also allows low income to receive clean energy at a discounted rate.</p> <p>There is no doubt that GHG is a leading cause to climate change. CA and specifically LA has a huge population, this is a chance to start making a change and helping to curb GHG emissions.</p> <p>A quick drive down the 201 freeway and you can see how many new EV's have been added to our area. Monrovia has fallen behind its neighbors in public EV stations, this program also offers incentives for more public chargers. Clean energy to power EV cars is a way to compound the benefits of EV's.</p> <p>With more than 50% of Monrovia residents being renters, myself included, we dont have a way to generate our own clean energy. This program would allow access to clean energy for people that will NEVER have the ability to get it any other way.</p> <p>In the last 4 years environmental issues have come to the front of many discussions. I want to say thank you to council and staff for following this program and introducing it to the community.</p>			
22134	10/7/2022 10:41	Brian c Tindall	I ask the council to approve this and add Monrovia at the 100% Green energy level.	X		
22135	10/7/2022 10:48	Casey Carlson	<p>Monrovia should join at the 100% Green level!</p> <p>There is no doubt that green house gasses are a leading cause of climate change. This is the only chance a renter like myself will have to make or buy clean energy. Yesterday was the best time to act, but the longer we wait the worse our heatwaves, floods, and droughts will get.</p> <p>Electric cars are becoming more common, clean energy to power them is a way to compound the benefits of EV's.</p> <p>I want to say thank you to council and staff for following this program and introducing it to the community.</p>	X		
22136	10/7/2022 10:48	Steven German	Yes, seems to be a positive move without a downside risk.	X		
22141	10/7/2022 11:44	Robert Ricewasser	I feel that the city should stay with Edison as they have in the past. It should be up to Edison to obtain electricity from reliable renewable sources. I don't feel a need to join the Clean Power Alliance at this time.		X	
22144	10/7/2022 13:52	Alexandra Swanson	Yes, this sounds like a great idea. All efforts that are beneficial for our environment, such as renewal energy sources, is welcome.. I'd like to commend the city's efforts in providing resources for composting, water conservation, and more. Renewal energy sources are just another step in improving the lives of everyone.	X		
22146	10/7/2022 14:08	Larry Marotta	Yes, I am strongly in favor of Monrovia joining this alliance.	X		
22161	10/8/2022 21:54	Julia Ohrt	I believe this is a plan that will greatly harm our residents that are already struggling to afford power rates as high as they are now. There is already a plan in place for the state to progressively shift to cleaner energy anyway and we will still need to pay the utilities for their infrastructure so this will cost us more for no real reason. There is no way to guarantee the energy mix we get is truly 100% clean energy, so it's absurd to pay more with fewer protections to the consumers. This will make costs of living even more difficult to keep up with.		X	
22164	10/9/2022 8:24	Mark Harvis	Yes, this seems like a good idea. Query: Why does the City and the JPA need to exist? Why cannot Edison provide this?	X		

22165	10/9/2022 11:03	Jennifer Hart	If I understand correctly they could do a rate adjustment every year. That's not viable for many of us. So for that alone I would say I'm not interested. I do understand that I can opt out and stay with edison. If if there was more oversight on rate increases and reviews perhaps.		X	
22168	10/9/2022 15:03	Kristine Thrailkill	I vote no against the proposed partnership. It is worrisome, because there seems to be minimal oversight over rates and the increases to those rates. At least, SCE has oversight from CPUC. I am all for renewal energy and fighting global warming. However, I am hesitate to entrust such a huge undertaking to a private company who probably has their own interests in mind more than the interests of their customers and the climate they are seeking to help.		X	
22170	10/9/2022 15:46	Mary J Tobin	Yes, I am interested in seeing Monrovia take steps to reduce greenhouse gas emissions & consequently mitigate the effects of climate change. I have solar panels on my home & take advantage of the various demand response incentives and other bill cutting incentives. Last year my electric bill for the year was \$226.49 so I can certainly afford another 1-3%. During the terribly hot months, it can be very uncomfortable to cut down on electric use. But I do believe that if everyone cut down some (for the greater good), we could maybe get out of this climate change mess. I'm willing to pay a little extra in my electric bill. Thank you for considering this!	X		
22180	10/10/2022 12:14	K Dod	Yes. Please participate. Monrovia should participate in alternatives that potentially are beneficial to the general well being. Because individuals can opt in there is an opportunity for choice in participating. Those that do not want to participate do not have to. Unlike the current single provider system.	X		
22211	10/12/2022 9:22	Jerome	No I do not believe Monrovia should join the CPA. While there's no cost to join, there are costs to exit the program. Additionally, SCE itself will be moving towards more renewable resources. SCE is a part of CAISO's area and made strides in obtaining more renewable resources. Advertising that cities/customers are able to choose that their power is 100% green energy is misleading. Electrical energy travels through the path of least resistance. And the energy produced in the electrical grid is a mix of nuclear, coal, natural gas, and renewables. There is no way to filter out electrons from coal vs those produced from solar panels when interconnected with other generation. What would help is to have more solar panels at the distribution level (under 100kV) near homes, office buildings, other customer load. The location of the generation helps to offset the immediate load. The benefits in the presentation are for all participants. What specific programs by CPA will help Monrovia directly? My work involves manaironmental issues have come to the front of many discussions. I want to say thank you to council and staff for following this program and introducing it to the community.		X	
Email	10/5/2022 9:24	Mike Antos	I am strongly in favor.	X
